

# Creating a Workflow

To create a Workflow:

1. On the Dashboard, Click **New Workflow**.
2. On the Left Pane, click **Toolbar**.
3. Expand the Categories, and drag and drop the required nodes from the toolbar. Click [HERE](#) to view the list of available nodes.

**NOTE:**

To delete a node, select the node, click **MANAGE** in the right properties bar and click **DELETE**

To duplicate a node, select the node, click **MANAGE** in the right properties bar and click **DUPLICATE**

4. Click the nodes to set the the arguments and properties.  
The properties window is displayed on the right corner when a node is selected.

★	InNamespace	string	← In
★	InSessionID	string	← In
★	Content	string	→ Out
★	Response	string	→ Out

5. Set the argument values and other required properties.

6. Connect the nodes with the required flow.

7. To save the workflow, click

on the **Left Pane**. The save window opens.

The screenshot shows a 'SAVE' dialog box with a blue header bar containing the word 'SAVE' and a close button (X). The dialog has three text input fields: 'Workflow Name' (with a character count of 0/50), 'Workflow Version', and 'Description'. At the bottom right of the dialog are two buttons: 'CLOSE' and 'SAVE'.

Fill the following information.

- **Workflow Name** - The Name of the Workflow
- **Workflow Version** - The Version of the Workflow
- **Description** - The Description of the Workflow

8. Click **Save**.

**NOTE:** Click

to clear the workflow.
