# Downloading a Workflow as Executable

Once a Workflow is designed it can be downloaded and executed on any support platform. To download a Workflow as executable please follow the following procedure.

1. Design the Workflow.
2. On the top left corner, click

   . The Dashboard is displayed.

3. On the **Dashboard Left Pane**, click **Build Executable**.The build Window opens.

Build Executable

Here you are able to create an executable of your workflow for any of the platforms available below. Once the executabe is generated, you may either download or host it inside a Docker.

	386	amd64
Windows	source zip	source zip
Linux	386 source zip	amd64 source zip
Mac OS X	386 source zip	amd64 source zip
Raspberry Pi (Linux)	arm source zip	
FreeBSD	386 source zip	amd64 source zip

4. Click on the required file format. The file will be downloaded. The following table describes the file formats available.

	Windows	Linux	MAC OS X	Raspberry Pi	FreeBSD
386	Executable file for Windows X86 Architecture	Executable file for Linux X86 Architecture	Executable file for MAC OS X X86 Architecture	Executable file for Raspberry Pi ARM	Executable file for FreeBSD X86 Architecture
amd64	Executable file for Windows X64 Architecture	Executable file for Linux X64 Architecture	Executable file for MAC OS X X64 Architecture	N/A	Executable file for FreeBSD X64 Architecture

NOTE: The .zip file in each section will provide a file with .ZIP file extension which will include the executable file of that specific architecture and platform.
